UPDATE FROM CIMENTART HQ, 28/10/2026

- The "Traditional Microcement" brochure is about Fino.
- Look: marbling and shading, 2 components.
- Misting water while you trowel is recommended, for every type of microcement.

Where this differs from the data sheet below, this applies.

SYSTEMS AND FINISHES

CimentArt Traditional Microcement is a decorative coating with 2 components, ideal to cover any type of surface.

Microcement is the best example of chemical and technological evolution, using the traditional method of cement manufacturing, and then add to it other products that chemically transform the cement, turn it into a more thin product, extremely hard, and at the same time highly flexible.

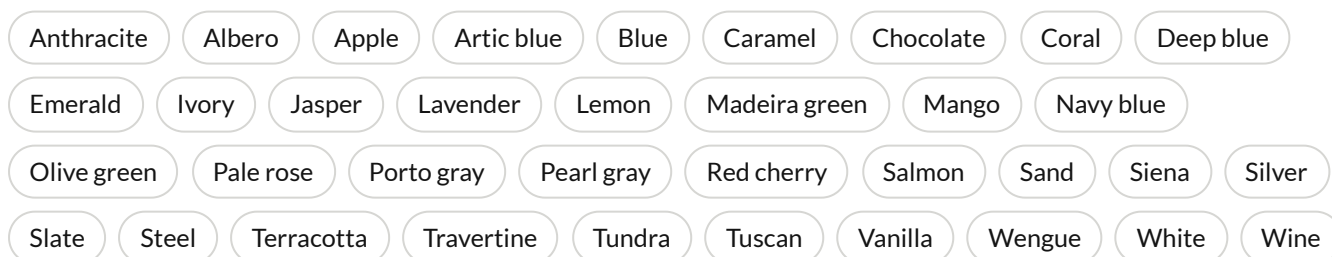

This way we get a product that does not crack, whose strength and hardness are incomparable with traditional cement or current mortars derived from cement. The Traditional Microcement does not require joints. Its application results in a continuous, marbled design without cuts or joints on the surfaces where it is applied. The result is an extremely aesthetic and completely waterproof decorative coating.

As it is pore-free and has no joints, it requires no maintenance and is easy and convenient to clean. As it has a minimum thickness (between 2mm to 4mm) and an enormous adherence, it can be applied on practically any surface, without the formation of debris.

It can be applied on interior walls and floors, facades, furniture, etc., and on an infinite number of surfaces such as: cement, plaster, plasterboard, marble, porcelain, tile, wood, granite, etc. On floors that receive a large amount of water (e.g. showers or outdoor floors) we recommend our Aqua range of products (100% waterproof).

TRADITIONAL Microcement is available in a wide range of colours and is quick and easy to install.

COLOURS

There may be chromatic differences due to the resolution and calibration of screens and the microcement peculiar finish.

OUR GUARANTEES

CimentArt Microcement declares that its products are guaranteed in the following situations, provided that the application rules and the technical data sheets are strictly followed:

- Crack-free guarantee: our products never crack. If a crack ever appears on our products, it will always be because the surface where it is applied has cracked.

- Adhesion guarantee: we guarantee that our products do not detach or peel off from the surface where they are applied.
- No decolourization guarantee: we guarantee that there is no decolourization or change in colour over time, even if applied outdoors. In the case of outdoor applications, we recommend using light colours.

This guarantee does not cover any structural movements of the building or home that cause cracks, detachment, or peeling on the surfaces where it is applied, or impacts, capillary action, floods, or scratches received on its surface.

TYPES OF FINISHES AND WHERE TO USE
